

## 3305 LP

**3305 LP** is a modern balancing machine designed for dynamic balancing of cars and vans wheels in one measurement cycle.

Voice synthesizer confirms each operation and suggests wheel balancing methodology.

**3305 LP** is supplied with USG automatic wheel measurement system and run-out sensor providing MINIMALIZATION procedure.

Laser adjuster shows precisely the place for balance weights.

### Features:

- pneumatic quick-release clamp
- calibration device
- voice synthesizer
- laser adjuster
- programme Alu + programme "hidden weight"
- automatic positioning lock
- non-contact wheel parameters acquisition
- optimization
- run-out measurement
- minimalization
- LCD monitor
- printer
- operator memory
- 7 ALU programmes
- offset, rim width, rim diameter in ALU 6 and ALU 7
- imbalance recalculation
- clamp fo motobikes - option
- adapte for wheels whithout central hole - option

## Dane techniczne

Rim diameter range:	10" - 30"
Rim width range:	2" - 15"
Maximum wheel weight	70 kg
Balancing accuracy	1 g

Measuring speed	140 obr/min
Power of the drive engine	80 W
Electric supply	230V / 50 Hz
Pneumatic power supply	8 - 10 bar
Dimensions	900/1170/1450
Weight	120 kg

## Distinctive features:

---

**Pneumatic quick-release clamp allows quick, easy and central clamping and unclamping of wheels on a shaft.**

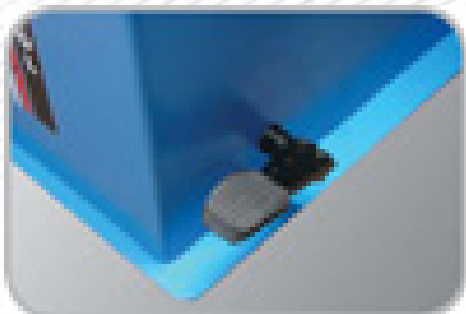

**Anvil.**

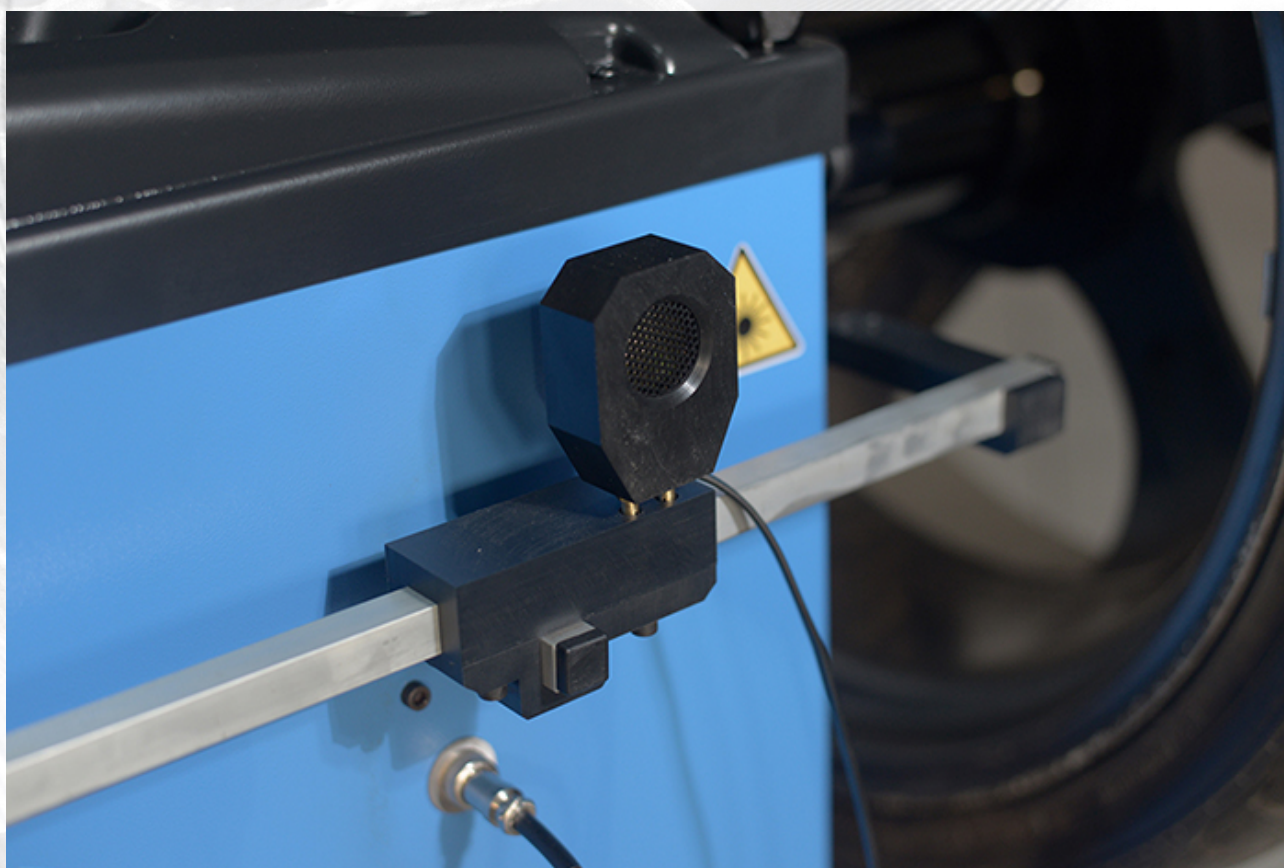

**Ergonomic tool tray.**

**Pedal controls clamping process.**
